OBJECTIVE

Software Developer moving into Generative AI Engineering with hands-on experience in LLMs, RAG, LangChain, HuggingFaceEmbeddings and AI agents. Experienced in building AI applications using embeddings, vector databases, tool calling, and LLM-based evaluation. Seeking to leverage software development expertise to build scalable and reliable Generative AI solutions.

ACADEMIC QUALIFICATION:

- **M.Tech** (Computer Science and Engg.) from **NIT Warangal**, Telangana (2018) - with **7.69 CGPA**
- **B.Tech** (Computer Science and Engg.) from **BBDNITM(UPTU)**, Lucknow, UP (2014) - with **76.45 %**
- **Intermediate** from UP Board, India (2010) - with **88.8 %**
- **High school** from UP Board, India (2008) - with **71.2 %**

TECHNICAL SKILLS:

- **Languages known:** Python, C/C++, Shell scripting.
- **Core Subjects:** Data Structure and Algorithm, Machine Learning, Artificial Intelligent, LangChain, LangGraph, HuggingFaceEmbeddings, DBMS, Operating System.
- **Tools:** GitHub, Copilot (Claude opus 4.6, Claude sonnet 4.7, GPT 5.4 etc.), VSCode, IDE, Anaconda, PyCharm, GDB, Snyk, JIRA, Valgrind, Coverity, Jenkins, EasyBI, PowerBI etc.
- **Operating Systems:** Unix/Linux, Windows.
- **Others:** Prompt engineering, building agentic AI using LLM Models (like AWS Bedrock, Azure AI foundry), workflow orchestration and MCP servers.

GenAI PROJECTS:

Shopping Agent:

- Shopping assistant that searches a local product database, supports shop by image, rates products, and places orders via explicit tool calls. Used multimodal LLMs with a SQLite backend for deterministic, testable interactions.
- Added automated evaluation using LangSmith, SentenceTransformers to measure tool call accuracy. Also, added response quality eval by using an LLM-as-judge to score agent responses on relevance, correctness.

Telecom ChatBot:

- RAG-based telecom customer-care chatbot, indexes FAQs, tickets and guides with Chroma and HuggingFaceEmbeddings and returns source-attributed answers via a Groq/GoogleGwenerativeAI LLM. Also, includes LangSmith evaluation.
- Created same chatbot also by using similarity_search_with_score() instead of a plain retriever to retrieve relevant chunks, designed fallback logic (distance threshold) to avoid hallucinations when evidence is weak.

JOB RESPONSIBILITIES & WORKING EXPERIENCE:

Total Experience: 7 years 9 months.

Teradata India Pvt. Ltd., Hyderabad: Software Engineer (3 years 10 months)

- Worked in Core Query Optimizer team. Primary responsibilities include feature development and maintenance of the existing source code of optimizing the query performance.
- Worked in multiple kinds of optimization techniques like query rewrite optimization, access path optimizations, cost-based optimizations etc.
- Supported features like unique/Non-unique Join index access path for performance improvement of tactical queries over the Join Index Rewrite method or, direct table access.
- Also, supported features in the area of view folding and correlated and non-correlated subquery processing, predicate pushdown etc.
- Resolved complex issues/bugs in different areas of query optimization, which required good knowledge of Teradata architecture and debugging/coding skillset.
- Used AI tool like Copilot (Claude opus 4.6, Claude sonnet 4.7, GPT 5.4 etc.) for software development and debugging bugs with the proper understanding of the importance of AI and prompt engineering in software development.
- Also, participated in building Agentic AI using LLMs (AWS Bedrock, Azure AI Foundry) and Teradata MCP server. Built an agent who used JIRA and GitHub MCP servers to get the details from JIRA Problem statements, comments etc. organize them in the way that we can use that information to update our Pull Request (PR) on GitHub. This way developers can save the time to update the PR as we update JIRA on regular basis, and those details can be used for automatic PR updating.

Dell EMC R&D, Bengaluru: Software Engineer 2 (3 years 11 months)\

- Dell Components' firmware update applications: Console-based cross platform application responsible for keeping all devices' MCU/CPLD firmware updated.
- Device discovery and enablement: Maintenance/development of inventory and discovery of the devices connected with Server using MCTP over i2c. Also, Maintenance of topology files.
- Parallely, I have extensive experience in automation framework outlining and scripting using *Python* in both Windows and Linux. Below are some of the areas I have done automation in:
 - Data extraction and transformation from excel sheets.
 - Web scraping using Jenkin REST API, json API.
 - UT Test framework: Design and automation of UT test framework using APIs selenium, paramiko, pandas, os, subprocess, smtplib etc.
 - Automation of code review and push process.
 - Automated process of creating Coverity Project/Stream, using 'cov-manage-im' coverity commands.
- Also, contributing as Quality SPOC to generate Quality and Status Report/Dashboard of various releases using *python*, *EazyBI* and *PowerBI* tools by fetching data from JIRA.
- Coordinate with other teams and employees as and when needed.

ACADEMIC PROJECTS:

➤ **B.Tech Project:**

Title: Customer Care Services Web Application

Description: Web Application to provide online customer care service

Team size: 4

Tool/Technology used: Eclipse, Tomcat server, java, html.

Role played: designing and coding.

➤ **M.Tech Project:**

Title: - Medical Knowledge Extraction and Analysis from The Noisy Medical Data

Description: The Medical Knowledge Extraction (MKE) provides high quality knowledge extracted from noisy input data after filtering out unrelated and incorrect information. It estimates trustworthiness of answers as well as doctor expertise from the data without any supervision.

In proposed method, doctors' expertise score calculation is updated by introducing the weighted distance or, loss one doctor should get based on his attempt to claim the answer to the question asked by the patient. This will do better estimation of expertise score and trustworthiness degree.

Analysis: Dataset is collected from medical website into *question text* and the *answer text* given by the doctor with his ID. *entity-based representation* is used to convert our text into structured data and for entity extraction. Analysis is done on both existing and proposed methods; the new equation of estimation gives better results.

Team size: Individual Project.

Tool/Technology: Data Mining, Machine learning, python (Anaconda).

ACHIVEMENTS /ACTIVITIES

- Participated in Robotics Workshop, RoboNest, Lucknow.
- Training on RPA (Robotics Process Automation) using AA (Automation Anywhere) tool.

PERSONAL DETAILS

Nationality, Passport No	Indian, S1054943
Languages Known	English, Hindi
Hobbies	Playing badminton, doing exercise, listening to music, watching TV series.
Strengths	Dedication, Hard work, Positive Attitude and Responsible.
Address	P/530 Peerbatawan, Barabanki U.P-225001

Date: 17ndSept'26
